Education

Northeastern University

Expected: Apr 2028

Bachelor of Science in Computer Science and Business Administration

Boston, MA

GPA: 3.8/4.0 | Dean's List Scholar | U.S. Citizen

Courses: Algorithms, Artificial Intelligence, Information Retrieval, Database Design, Object-Oriented Design, Cybersecurity

Activities: TAMID (Director of Software); Code4Community (Software Engineer); Forge (Software Engineer); Volunteering

Experience

Sonos Inc.

Jun 2026 – Aug 2026

Software Engineering Intern, iOS App Experience

Boston, MA

- Shipped real-time search suggestions end-to-end in the Sonos iOS app for 16M+ households, serving instant results from an on-device cache with no extra network calls, built in **Swift, SwiftUI, and Combine** with telemetry and staged rollout
- Built a reusable diagnostics framework that detects device, connectivity, and network-topology issues in multi-device homes
- Owned 5 feature areas at once as the sole iOS engineer, shipping 7 features to **10M+ daily active users**

Philips Healthcare

Jan 2026 – May 2026

Software Engineering Intern, Systems Integration team

Cambridge, MA

- Built a provisioning API for Philips' **PIC iX** patient-monitoring system, cutting test setup from **100+ hours to 2**
- Created the automation framework for PIC iX performance tests on simulated deployments of up to **2,550 hospital beds**
- Built a self-scaling monitoring service for thousands of VMs on **TimescaleDB**, flagging anomalies via a Teams AI agent
- Extended deployment automation from virtual machines to physical servers using **FOG/PXE** network booting
- Improved a **FastAPI**, React, and PostgreSQL deployment manager and troubleshoot network failures on Linux VMs

Auribus Labs

Feb 2025 – Sep 2025

Software Engineering Intern (part-time)

Boston, MA

- Built an online hearing test in **Next.js, TypeScript, GraphQL, and GCP**, 95% accurate in early diagnostic evaluations
- Built an FDA-compliant prescription healthcare iOS app in **Swift and SwiftUI**, used by 60+ clinical researchers

Venu AI

Apr 2025 – Jul 2025

Software Engineering Intern (part-time)

Remote

- Built core CRM workflows and asynchronous background job pipelines using **Django, Celery, Redis, and PostgreSQL**
- Optimized slow database queries and high-traffic REST endpoints in the CRM, cutting API latency by up to **70%**
- Refactored email-provider integrations so customer emails sent from the CRM were less likely to land in spam

Projects

TandemCode | tandemcode.space | github.com/naman0r/tandemcode

Sep 2025 – Present

- Built a live pair-programming interview platform where two people edit the same code via **Yjs** and WebSockets
- Ran submitted code against hidden tests in isolated **gVisor** containers with no network and strict resource limits
- Deployed the API, sandboxed judge, and Postgres on **AWS Lightsail** with Docker, Caddy TLS, and nightly backups

Dockmaster | trydockmaster.vercel.app | github.com/naman0r/dockmaster

Aug 2026 – Present

- Built a modular developer observability platform in **Next.js** that monitors and manages local and remote machines
- Stopped runaway dev servers with SIGTERM-then-SIGKILL process-tree kills that re-verify each PID before signaling
- Added remote-machine support over **SSH**, running a Node agent on demand so remote Macs keep no ports open

Technical Skills

Languages: Python, Java, TypeScript, Swift, SQL, C++, Go, HTML/CSS

Libraries & Frameworks: SwiftUI, React, Next.js, FastAPI, Django, Flask, Node.js, React Native, GraphQL, PyTest

Infrastructure & Data: AWS, GCP, Azure, Linux, Docker, gVisor, PostgreSQL, TimescaleDB, Redis, Nutanix, FOG/PXE

Interests: Road Biking, Weight Lifting, Rubik's Cubing, Clash Royale, Startups, Community Service
