Education

Northeastern University

Expected: Apr 2028

Candidate for Bachelor of Science in Computer Science and Business Administration

Boston, MA

GPA: 3.8/4.0 | Dean's List Scholar | U.S. Citizen

Courses: Algorithms, Artificial Intelligence, Information Retrieval, Database Design, Object-Oriented Design, Cybersecurity

Activities: TAMID at Northeastern (Director of SW); Code4Community (SWE); Forge (Prev SWE); Volunteering

Experience

Sonos Inc.

Jun 2026 – Aug 2026

Software Engineering Intern, iOS App Experience

Boston, MA

- Shipped search suggestions end-to-end in the iOS app (16M+ households), serving instant results from an on-device cache with zero added network calls, in **Swift, SwiftUI, Swift Concurrency, Combine** with telemetry and staged rollout
- Built a reusable diagnostics framework flagging device, connectivity, and network-topology issues in multi-device homes
- Drove 5 feature areas at once as sole iOS engineer, writing 40+ tickets and shipping 7 flagged features to **10M+ DAUs**

Philips Healthcare

Jan 2026 – May 2026

Software Engineering Intern, Systems Integration team

Cambridge, MA

- Built a declarative provisioning API for **PIC iX** hospital deployments, cutting environment setup from **100+ hours to 2**
- Built the automation framework for PIC iX performance tests on simulated deployments of up to **2,550 hospital beds**
- Built a self-scaling monitoring service ingesting metrics from 1000s of VMs into **TimescaleDB** with a Teams AI agent
- Extended VM automation to bare metal via a **FOG/PXE** boot path, giving physical hosts identical post-install config
- Improved orchestration and concurrency in a deployment manager on **PostgreSQL, React, FastAPI, Python threads**

Auribus Labs

Feb 2025 – Sep 2025

Software Engineering Intern (part-time)

Boston, MA

- Built a top-of-funnel hearing test in **Next.js, TypeScript, GraphQL, GCP** with 95% preliminary diagnostic accuracy
- Built an FDA-compliant Rx healthcare app in **Swift and SwiftUI**, used by 60+ clinical researchers at top institutions

Venu AI

Apr 2025 – Jul 2025

Software Engineering Intern (part-time)

Remote

- Built core CRM workflows and asynchronous background job pipelines using **Django, Celery, Redis, and PostgreSQL**
- Optimized database queries and high-volume REST endpoints to streamline workflows, reducing latency by up to **70%**
- Refactored email-client API integrations to reduce spam flagging and enhanced user-facing UI for key customer flows

Projects

TandemCode | tandemcode.space | github.com/naman0r/tandemcode

Sep 2025 – Present

- Built a pair-programming interview platform with a shared editor synced over **Yjs** CRDTs and FastAPI WebSockets
- Judged Python submissions against hidden tests in no-network **gVisor** containers with time, memory, and process limits
- Deployed the API, sandboxed judge, and Postgres on **AWS Lightsail** with Docker, Caddy TLS, and nightly backups

Dockmaster | trydockmaster.vercel.app | github.com/naman0r/dockmaster

Aug 2026 – Present

- Built a modular developer observability platform in **Next.js** that monitors and manages local and remote machines
- Made destructive actions safe: **SIGTERM**-then-**SIGKILL** tree kills with PID-reuse checks, and server-side secret redaction
- Extended monitoring to a homelab Mac over **SSH** via an on-demand Node companion, with no remote listener to expose

Technical Skills

Languages: Python, Java, TypeScript, Swift, SQL, C++, Go, HTML/CSS

Libraries & Frameworks: SwiftUI, React, Next.js, FastAPI, Django, Flask, Node.js, React Native, GraphQL, PyTest

Infrastructure & Data: AWS, GCP, Azure, Docker, gVisor, PostgreSQL, TimescaleDB, Redis, Nutanix, FOG/PXE, Grafana

Interests: Road Biking, Weight Lifting, Rubik's cubing, Clash Royale, Startups, Community Service
